**CENTRAL
VACUUM
SYSTEMS**

MaxVak Central Vacuum Systems are innovative, effective and easy-to-use.

The dust is expelled to your MaxVak unit, filtered and then the exhaust air is discharged outside, unlike portable vacuum cleaners - the air does not get the opportunity to recirculate!

The air inside your home stays clean and fresh during vacuuming so your home will be healthier. New Zealand home owners are choosing to install Central Vacuum Systems more than ever before. Don't miss out on the opportunity to future proof your home with this desirable and healthy feature! MaxVak Central Vacuum Systems offer a superior clean, which is a real advantage to those who suffer from asthma and allergies.

Unlike a portable vacuum cleaner, MaxVak systems expel the microscopic dust particles to a central location and then exhaust the air outside. As a result the air in your home becomes fresher and healthier. Your MaxVak system will help to eliminate dust-mites and bacteria meaning they won't get the chance to spread through carpets, rugs and furniture.

Three-stage filtration increases your MaxVak systems effectiveness. In the first stage, debris is removed from the air by the cyclonic action. The second stage uses a textile filter and the third stage uses a HEPA filter to remove the rest of the dust. The debris is then collected in a large removable dust bin and the need for a dust bag is eliminated*.

MaxVak Central Vacuum Systems are so simple and convenient to use. All you have to manoeuvre is the hose, so say goodbye to the hassle of moving a portable vacuum cleaner from room to room. Even the ability to control the power level is conveniently located on the hose handle*, giving you complete flexibility. Simply plug the hose into the wall socket, hit the switch and you're ready to go!

*Based on MaxVak 2400 Unit - 9m Switched Variable Speed Hose Set.

MAXVAK

FEATURES AND BENEFITS

POWERFUL & RELIABLE

The powerful 2400 Watt unit is driven by twin turbo cyclonic motors.

HEALTH BENEFITS

MaxVak improves indoor air quality by expelling fumes, pollens and allergens out of your home.

With 20% of the New Zealand population suffering from asthma and allergies it is vital to remove dust and allergens from your home.

MaxVak Central Vacuum Systems achieve this with high efficiency filtration.

HIGH EFFICIENCY FILTRATION

MaxVak uses HEPA and cyclonic filtration — HEPA filters are highly efficient filters which capture 98% at 0.3 microns (dust particles).

COST EFFECTIVE

MaxVak includes leading edge technology and market leading features at highly competitive and affordable prices.

ADJUSTABLE SPEED

Your MaxVak 2400 six speed adjustable switched hose provides ultimate cleaning control regardless of surface.

QUIET OPERATION

Your MaxVak is usually installed in a garage or basement away from living spaces in your home.

MaxVak 1400 has a built in acoustic silencer and has the option of an external silencer which connects to PVC piping. The MaxVak 2400 has an external silencer included in the accessory kit.

FUTURE PROOF YOUR HOME

Your MaxVak will add value to your home, create a healthier environment to live in while maximising your comfort.

▶ MaxVak 2400 six speed adjustable hose.

Using a MaxVak Central Vacuum System ensures your home is a cleaner, healthier place in which to live.

MAXVAK 2400W UNIT & HOSE PACK
