“creating healthier homes”

Central Vacuum Specialists

With a MaxVak Central Vacuum System the dust won't get a chance to settle!

## MaxVak Central Vacuum Systems are innovative, effective and easy-to-use.

Unlike portable vacuum cleaners, the air does not get the opportunity to recirculate!

The dust is expelled to your MaxVak unit, filtered and then the exhaust air is discharged outside.

The air inside your home stays clean and fresh during vacuuming your home will be healthier.

### Easy to Use

MaxVak Central Vacuum Systems are so simple and convenient to

use. All you have to manoeuvre is the hose - say goodbye to the hassle of moving a portable vacuum cleaner from room to room.

The ability to control the power level is conveniently located on the hose handle\*, giving you complete flexibility.

Simply plug the hose into the wall socket, hit the switch and you're ready to go!

### Easy to install

While it is obviously easier to install the MaxVak system in a new home, it can also be installed in existing homes, with the pipe

work running either under the floor or through the ceiling space.

The vacuum sockets are then situated at convenient locations throughout the home and are connected via the PVC pipe to the vacuum unit in the garage or basement.

New Zealand home owners are choosing to install Central Vacuum Systems more than ever before. Don't miss out on the opportunity to future proof your home with this desirable and healthy innovation!

\* Based on: MaxVak 2400

### Helpful Hints

Centrally locate your sockets, they will cover a larger floor area in this position!

If you have stairs place the vacuum socket at the bottom of the stairs so that you can work your way up, rather than having the hose chasing you down!

### Vacu Sweep

For added convenience, the Vacu Sweep option enables you to sweep debris from hard floor surfaces directly into the vacuum chute.

Discreetly located under a bench, this is the no mess, easy cleaning solution for all hard floor surfaces.

## USER FRIENDLY LCD INTERFACE

### 1. Power Indicator

Indicates the power level at which the motor is operating.

### 2. Filter Status

Shows the status of the HEPA filter. When the icon is full, the filter must be cleaned.

### 3. Motor Status

Indicator represents the motor status and will light up only when the thermostat or overload protector has activated as a unit safety measure.

### 4. Hours of Operation

Shows the accumulated operation time.

### 5. Dust Indicator

When the dust bin is full, the icon on this indicator will also be shown as full.

### 6. Service

The service indicator will flash when maintenance is necessary.

## Service Keypad

### Mode

Displays the running time of the motor as well as the HEPA and SERVICE icons.

### Plus/Minus

Use these buttons to increase/decrease the power level.

### Rest

This will reset the system to factory defaults.

## Using a MaxVak Central Vacuum System ensures your home is cleaner and healthier.

### Clean your home and clear the air

MaxVak Central Vacuum Systems offer a superior clean, which is a real advantage to those who suffer from asthma and allergies.

Unlike a portable vacuum cleaner, MaxVak systems expel the microscopic dust particles to a central location and then exhaust the air outside. As a result the air in your home becomes fresher and healthier.

Your MaxVak system will help to eliminate dust-mites and bacteria meaning they won't get the chance to spread through carpets, rugs and furniture.

### Delivers advanced filtration

Three-stage filtration increases your MaxVak systems effectiveness.

In the first stage, dust is removed from the air by the cyclonic action.

The second stage uses a textile filter and the third stage uses a HEPA filter to remove the rest of the dust.

The debris is then collected in a large removable dust bin and the need for a dust bag is eliminated\*.

## MaxVak

### FEATURES AND BENEFITS

#### Powerful & Reliable

The powerful 2400 Watt unit is driven by twin turbo cyclonic motors.

#### Health Benefits

MaxVak improves indoor air quality by expelling fumes, pollens and allergens out of your home.

With 20% of the New Zealand population suffering from asthma and allergies it is vital to remove dust and allergens from your home. MaxVak Central Vacuum Systems achieve this with high efficiency filtration.

#### High Efficiency Filtration

MaxVak uses HEPA and cyclonic filtration — HEPA filters are highly efficient filters which capture 98% at 0.3 microns (dust particles).

#### Cost Effective

MaxVak includes leading edge technology and market leading features at highly competitive and affordable prices.

#### Adjustable Speed

Your MaxVak 2400 six speed adjustable switched hose provides ultimate cleaning control regardless of surface.

#### Quiet Operation

Your MaxVak is usually installed in a garage or basement away from living spaces in your home. MaxVak 1400 has a built in acoustic silencer and has the option of an external silencer which connects to PVC piping. The MaxVak 2400 has an external silencer included in the accessory kit.

#### Future Proof Your Home

Your MaxVak will add value to your home, create a healthier environment to live in while maximising your comfort.
